## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 20 February 2007 has been entered.

### ***Response to Arguments***

Applicant's arguments, see page 4, filed 20 February 2007, with respect to the rejection(s) of claim(s) 3,4,5 and 16 under 35 U.S.C 102 and 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Schwarzmann et al. (4,775,296).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Schwarzmann et al. (4,775,296), hereinafter "Schwarzmann". Schwarzmann discloses a rotating blade (10) of a turbine. The blade includes a coolant passage having a

curved flow section (64) and a second passage comprising a dust discharge hole (72) having a longitudinal axis parallel to the axis of the turbine and tangentially branching off of the coolant passage at the curved flow section (64) in the neighborhood of the tip (18) (Schwarzmann column 4, lines 41-45). Since applicant has not specified what dimensions are necessary "to enable the introduction of a borescope through the dust discharge aperture" and since the use of borescopes inserted into apertures for inspection of turbine blades is known in the art, as attested to by Applicant [0004], the dust discharge aperture of Schwarzmann is capable of having a borescope inserted there through and therefore meets the limitations of the claims.
